

What is claimed is:

1. A method for transferring Web-based information over a network to a personal information management system having calendar and contact data for a set of users, the method comprising:
 - 5 selecting a set of Web-based information;
 - creating a transfer request that includes at least the set of Web-based information and an address for a server associated with the personal information management system and in communication with the network;
 - 10 sending the transfer request to the server, the server having access to the calendar and contact data for the set of users; and
 - storing the set of Web-based information at the server, the set of Web-based information associated with at least one user in the set of users.
- 15 2. A method according to claim 1, wherein the transfer request is a hypertext transfer protocol request.
3. A method according to claim 1, wherein the set of Web-based information is stored in a database in communication with the server.
- 20 4. A method according to claim 1, wherein the network is the Internet.
5. A method according to claim 1, wherein the set of Web-based information is contact information and the set of Web-based information is stored with the contact data for the at least one user.
- 25 6. A method according to claim 1, wherein the set of Web-based information is an event and the set of Web-based information is stored with the calendar data for the at least one user.
- 30 7. A method according to claim 1, wherein the Web-based information is

PCT/US2010/039000

located on the network using a Web browser and the transfer request is created using a toolbar inserted into the Web browser.

8. A method according to claim 7, further including sending a response from
5 the server to the Web browser to indicate that the set of Web-based information has been transferred to the personal information management system.

9. A method according to claim 7, wherein the set of Web-based information is selected by highlighting information displayed by the Web browser.
10

10. A method according to claim 7, wherein the toolbar includes a link to create the transfer request to transfer the set of Web-based information.

11. A system for transferring Web-based information over a network to a
15 personal information management system having calendar and contact data for a set of users, the system comprising:
 - a toolbar inserted into a Web browser, the Web browser for searching for and displaying Web-based information, where a user from the set of users locates and selects a set of Web-based information from information displayed by the
 - 20 Web-browser;
 - a link, included in the toolbar, the link creating a transfer request including at least the set of Web-based information selected by the user, the transfer request directing the set of Web-based information to the personal information management system when the link is selected by the user; and

- 25 at least one server, coupled to the network, to receive the transfer request and store the set of Web-based information, the set of Web-based information associated with the user.

12. A system according to claim 11, wherein the transfer request is a hypertext
30 transfer protocol request.

- TOKUHEI - 2007-12560
13. A system according to claim 11, wherein the Web-based information is stored in a database in communication with the at least one server.
14. A system according to claim 11, wherein the set of Web-based information is contact information and the set of Web-based information is stored with the contact data for the user.
15. A system according to claim 11, wherein the set of Web-based information is an event and the set of Web-based information is stored with the calendar data for the user.
16. A system according to claim 11, wherein the set of Web-based information is selected by highlighting information displayed by the browser.
- 15 17. A computer program product for use on a computer system for transferring Web-based information over a network to a personal information management system having calendar and contact data for a set of users, the computer program product comprising a computer useable medium having computer readable code thereon, the computer readable program code including:
- 20 program code for selecting a set of Web-based information;
- program code for creating a transfer request that includes at least the set of Web-based information and an address for a server associated with the personal information management system;
- program code for sending the transfer request to the server, the server having access to the calendar and contact data for the set of users; and
- program code for storing the set of Web-based information at the server, the set of Web-based information associated with at least one user in the set of users.
- 30 18. A computer program product according to claim 17, wherein the transfer request is a hypertext transfer protocol request.

19. A computer program product according to claim 17, wherein the set of Web-based information is contact information and the set of Web-based information is stored with the contact data for the at least one user.
- 5 20. A computer program product according to claim 17, wherein the set of Web-based information is an event and the set of Web-based information is stored with the calendar data for the at least one user.
